Leo Strijbos

ljfs2@cam.ac.uk — leostrijbos.com — github.com/Leo-Strijbos

Education

University of Cambridge 2024 – 2027
BA in Computer Science
Highest mark in software and security engineering.

International School Basel 2008 – 2023
International Baccalaureate Diploma, 44/45 points (Top 1% of cohort)
Computer Science Academic Achievement Award 2023

Work Experience

Founding Engineer Intern, Briefcase July – August 2026
AI autopilot for accountants and bookkeepers.

- Shipped the Mileage Claims feature end-to-end.
- Improved the autopublish rate.
- Designed and built AI memories, a massive step towards truly personalised software.
- Built self-healing software that investigates and repairs infrastructure failures in production.
- Got a full-time job offer.

Cofounder, The Bot Factory April 2025 – September 2025
Boutique AI automation agency serving UK businesses. Clients included property managers, commercial finance brokers and online communities.

- Designed and delivered client projects, including an end-to-end maintenance request management platform that saved a property management firm approximately 30 hours per week.
- Took charge of marketing, growing SEO to 1-2 booked meetings per week, learning to take sales calls and closing deals.

Machine Learning Research Intern, Novartis (invited back) Aug – Sep 2025

- Research on Bayesian modelling for dose-finding studies.
- Built a prototype tool using LLMs in an RStudio sandbox to generate and self-correct models; essentially Cursor for Bayesian inference in RStudio. An early form of recursive self-improvement.
- Delivered seminar on Bayesian modelling with AI.

Machine Learning Research Intern, Novartis Sep – Oct 2023

- Designed an LLM-based system to extract structured information from clinical trial reports.
- Delivered seminar on practical applications of LLMs in clinical informatics.

Projects

Packing Problems
12 verified improvements to the best-known values in Erich Friedman's Packing Center, spanning ten cells across four tables; two of the records had stood since 2007. Each packing was reconstructed from the incumbent's published configuration, then converged exactly by holding the contact topology fixed and solving via sequential quadratic programming (SQP).

BatchFold
Parallelisation and batching infrastructure for protein folding models, built for Claude. 28 MCP tools

and five skills, running on a Cloudflare Worker, SQLite database and object store on the user's own machine.

Mind
A plug-and-play LLM memory backend which models the human brain. Agents send raw perceptions into Mind and query it for the smallest useful memory packet before they act. Mind's functionality includes storage, consolidation, recall, corrections, retention, and evidence packaging.

OttoProp
1 of 11 teams to be invited to the Ada Ventures hackathon for £100k in funding. Built an AI intern for property managers which autonomously handles maintenance requests end-to-end, sends emails, and adds to the CRM using the LangChain agentic framework.

Patience
A TypeScript package for creating queue-based AI agents. It is based on typed task graphs, where one task can enqueue others and later tasks can wait on earlier ones, forming a DAG. Also includes durable SQLite runs with crash recovery, retries and human-in-the-loop waits, plus a local inspector for debugging.

Pinky
A macOS menu bar companion that watches your screen, walks you through workflows step by step, and turns what you do into reusable skill files. Teach it a process on your screen, then ask it to guide you through that workflow later or export the result as a skill file for other AI tools.
